

## Avaya Macintosh Interface

- If you access the Lotus Notes client on a Macintosh computer, and you wish to use the Avaya interface, please contact the OIT Help Desk.
- New voice mail messages will appear in the Inbox of your Lotus Notes client as an unread email with a .WAV attachment.
- To listen to your voice mail message, you can double click on the Msg001.wav attachment and choose **OPEN**. This will open the message for playback in your default media playback program, usually iTunes or QuickTime.
